

4Managed Solutions LLC

Infrastructure that is ready for AI

I'm not here to sell you AI. I'm here to make sure yours works.

Today's structured cabling, acceptance testing, and static network certifications aren't enough. If that's all you have, **your AI deployment will fail · repeatedly.**

We stress-test, certify, and harden your entire Layer 1 & 2 infrastructure so it performs every time.

THREE WAYS TO GET STARTED

Entry point 01

New installation

Starting from scratch?
We design, build, or do both, delivering an infrastructure customized to meet the challenges of your industrial environment, then stress-test and certify its performance.

[Build it right the first time](#)

Entry point 02

Existing infrastructure

Not sure what you have?
We assess, stress-test and certify what your current infrastructure or individual links can actually support.

[Find out what you actually have](#)

Entry point 03

Certification only

Confident in your infrastructure?
We stress-test and certify its performance, giving you the documented proof to back it up.

[Prove what you think you know](#)

Stress-testing defines the benchmark for infrastructure capability. It exposes weaknesses and performance limitations that will negatively affect and impair your AI and automation operation — weaknesses that normal best practice testing will never reveal.

The finished product — every time

A documented, certified record of your infrastructure's rated maximum capacity and guaranteed performance. Not a report. Not a recommendation. A certification — backed with a lifetime performance guarantee.
